EDUCATION

University of California, Berkeley

Bachelor of Science in Electrical Engineering and Computer Science

Berkeley, CA

May 2028

WORK EXPERIENCE

Northrop Grumman

Redondo Beach, CA

Software Engineering Intern (Interim Security Clearance)

June 2026 - August 2026

- Identified a high-latitude bottleneck in client mission-planning software, evaluated solutions with business management, and accelerated terrain generation **up to 36%** by doubling processing from **4 to 8 threads**
- Automated ATO/ACO conversion for mission-planning workflows, reducing manual conversion time by 30% by defining and validating mappings across **243 fields** from USMTF 2004 to 2000 per MIL-STD-6040.

Whitehelmet

Remote

Technical Product Management Intern

Feb 2026 - June 2026

- Reduced manual KPI reconciliation by **63%** across **20 client organizations** by owning product definition for an AI reporting platform, gathering stakeholder requirements, and defining end-to-end workflows
- Enabled **10+ configurable KPI formulas** and dynamic spreadsheet formats by writing PRDs, workflow diagrams, and technical requirements for a flexible reporting architecture
- Reduced report-generation time by **80%** by incorporating stakeholder feedback through demos and driving final refinements through **production launch**

Lucid Motors

Berkeley, CA

Technical Product Manager (Contract)

Sep 2025 - December 2025

- Owned the Pricing Agent for an AI competitive-intelligence platform used by Lucid leadership, reducing manual analysis time by **87.5%** across **8 automotive brands**
- Translated **5 stakeholder interviews** into product requirements and prioritized the end-to-end pricing workflow, shipping **10+ features** across data collection, dashboard insights, and AI analysis
- Launched the dashboard to Lucid leadership by managing a weekly roadmap and coordinating a **6-person cross-functional team**, achieving **90%** lower analytics latency and **30%** faster rendering in testing

Claythis

San Francisco, CA

AI/ML Intern

Feb 2025 - June 2025

- Owned experimentation for an AI character-generation workflow, evaluating **5+ diffusion models** across **20+ test cases** and achieving an **estimated 90%+** visual similarity
- Designed a **ControlNet + OpenPose** pipeline to improve pose consistency, translating findings from daily generative-AI research into product experiments
- Reduced model iteration time from **10+ minutes** to **~2-3 minutes** by benchmarking RunPod GPUs across generation quality, latency, and cost

PROJECTS

[Google Docs AI Editor](#) - a16z x Berkeley M.E.T Hackathon

Sep 2025

- Led a 0→1 Google Docs AI editor from ideation to demo, eliminating LLM-to-document context switching through an embedded agent and winning **1st place** among 200 teams.
- Designed Chat and Edit modes with Accept/Reject diffs, giving users control over AI-generated changes while prioritizing document-aware editing as the core MVP.

[Real-Time League of Legends AI Coach](#) - CalHacks

November 2025

- Led a 4-person team to build a real-time AI coach for beginner League of Legends players, architecting **4 gameplay signals** to deliver micro- and macro-level recommendations with **<3-second latency**.
- Delivered **20+ coaching events** per minute by designing a priority engine that reconciled OCR, Riot API, audio, and LLM signals into actionable recommendations.

SKILLS

Product: Product Requirements (PRDs), Roadmapping, Feature Prioritization, Stakeholder Discovery, Agile/Scrum, Jira, Confluence

AI & Data: LLMs, Generative AI, SQL, PostgreSQL, PyTorch, Hugging Face, Product Analytics, MCP

Engineering: Python, TypeScript, React, Next.js, FastAPI, REST APIs, Docker, AWS, GCP
